

Toxeraser: the tool for substitution specifically designed for the cosmetic sector

Davide Luciani

Laboratory of Environmental Chemistry and Toxicology
Istituto di Ricerche Farmacologiche "Mario Negri" IRCCS

Action B5: Building the SPHERA risk assessment tool with the capacity to integrate risk factors into a single decision-making index

Task B.5.2. The ToxEraser concept

- a set of molecules matching the functional category can be retrieved along with its classification in terms of safety (see Table of *Cosmetics according to safety*):
- further details can be also appreciated:
 - a) the specific US institution providing the safety response
 - b) the molecules' identifier (SMILES, CAS, IUPAC name)

Action B5: Building the SPHERA risk assessment tool with the capacity to integrate risk factors into a single decision-making index

Task B.5.2. The ToxEraser concept

- **Systematic retrieval of information about cosmetics, concerning:**
 - safety
 - functional uses

Action B5: Definition and implementation of the ToxEraser concept to reduce chemical risk

Task B.5.1. Definition of the libraries of parameters to characterize safety

The 'Cosmetics' case study

Existing exclusion list

- SIN list
- Substances not allowed or restricted in cosmetics (Annexes of the Cosmetic Regulation 1223/2009)
- CMR from COSING

Existing safer chemicals list

- Safer Chemical Ingredient List (SCIL)
- Generally Recognized As Safe (GRAS)
- Allowed in the European market

Other lists

- CIR (Cosmetic Ingredient Review)
- IFRA (International Fragrance Association)

Action B5: Definition and implementation of the ToxEraser concept to reduce chemical risk

Cosmetics ingredients databases characteristics:

- information covers an extensive range of toxicological endpoints and environmental fate data
- assessed endpoints depend also on the functional category of the cosmetic (for instance, skin sensitization represents a main concern for fragrances)
- information is extracted by considering distinct line of evidence (toxicokinetic toxicological, carcinogenicity studies, reproductive toxicity, dermal, ocular and mucosal irritation and sensitization)
- evaluation covers both experimental and *in silico* approaches, whereby '*in vivo*' evidence 'weights' more than results of '*in vitro*' and '*in silico*' assessment
- when based on the evaluation of dossiers on chemical ingredient, the manufacturer is supposed to disclose all product ingredients
- in some cases, information derives from an extensive search of the world literature
- furthermore, an ingredient regarded as generally safe can also be an ingredient that has been allowed in the marked without causing any harm

Cosmetics according to safety

meta-classes labels	Rank	N
regarded as generally safe	1	456
regarded as generally safe with restrictions	2	412
only commercially available	3	385
only commercially available with restrictions	4	565
banned or not recommended	5	417

Cosmetics according to safety

Class A labels	Class B labels	meta-classes labels	Rank	N
US and UE	<i>allowed without restrictions</i>	regarded as generally safe	1	456
	<i>allowed with restrictions</i>	regarded as generally safe with restrictions	2	412
Only UE	<i>allowed without restrictions</i>	only commercially available	3	385
	<i>allowed with restrictions</i>	only commercially available with restrictions	4	565
	<i>banned or not recommended</i>	banned or not recommended	5	417

Cosmetics according to safety

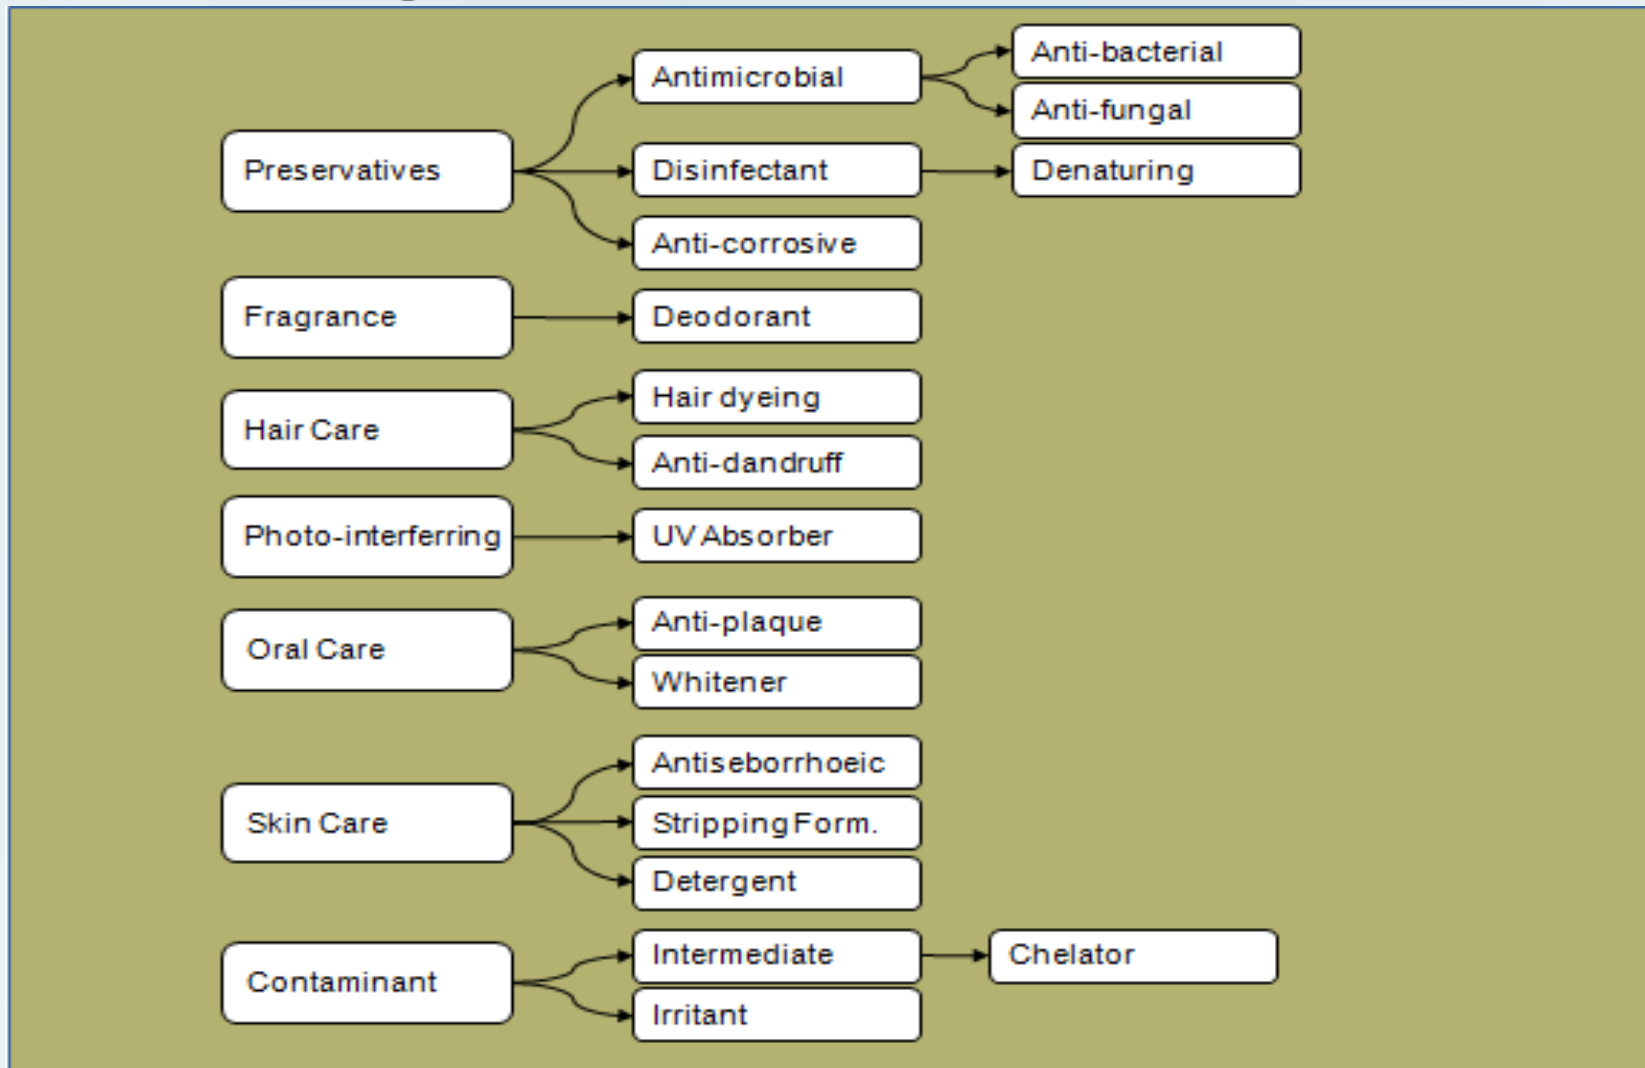

Class A labels	Class B labels	meta-classes labels	Rank	N	Cosing N(%)	CMR N(%)	SCIL N(%)	CIR N(%)	SCOGS N(%)	IFRA N(%)
US and UE	<i>allowed without restrictions</i>	regarded as generally safe	1	456	152 (33.33)	0	181 (39.69)	339 (74.34)	14 (3.07)	0
	<i>allowed with restrictions</i>	regarded as generally safe with restrictions	2	412	175 (42.48)	38 (9.22)	38 (9.22)	404 (98.06)	8 (1.19)	4 (0.97)
Only UE	<i>allowed without restrictions</i>	only commercially available	3	385	385 (100)	0	0	0	0	0
	<i>allowed with restrictions</i>	only commercially available with restrictions	4	565	503 (89.03)	81 (14.34)	0	0	0	102 (18.05)
	<i>banned or not recommended</i>	banned or not recommended	5	417	215 (51.56)	218 (52.28)	0	25 (6.00)	0	68 (16.31)
total	2235	1430 (63.98)	337 (15.08)	219 (9.80)	768 (34.36)	22 (1.94)	174 (7.79)			

Action B5: Building the SPHERA risk assessment tool with the capacity to integrate risk factors into a single decision-making index

Task B.5.2. The ToxEraser concept

Cosmetics according to their functional uses: the hierarchical ontology

Action B5: Building the SPHERA risk assessment tool with the capacity to integrate risk factors into a single decision-making index

Task B.5.2. The ToxEraser concept

Substitute a cosmetic with a safer one

The user is expected to specify the cosmetic functional category of interest. To facilitate the search, the **functional category ontology** covers both:

- a) the relationships between generic and specific labels
- b) synonyms referred to the same category
